

HYTRANS SQUEEZERAMP

The Hytrans Squeeze Ramp (SQR) is the ideal solution for smaller-diameter hose crossings. It allows multiple hose lines of up to 8" (200 mm) to be crossed safely by road vehicles while ensuring uninterrupted water flow.

Compact and optimal design

With a total height of just 100 mm for 6-inch (150 mm) hoses and 125 mm for 8" (200 mm) hoses, and a length of only 2000 mm, the Squeeze Ramp is the most compact hose ramp on the market. Its small footprint minimizes storage requirements, making it highly efficient for rapid deployment in emergencies.

Due to the optimal design, the pressure loss across the full length of the SqueezeRamp is only 0.2 bar!

Supports multiple hose lines

By using multiple feedthrough sections in parallel, multiple hose lines can be laid side by side, providing the flexibility and reliability needed for complex operations.
