

MULTI-GAS DETECTOR X-AM® 2800

Dräger X-am® 2800 Multigas Detector: Safe and Efficient Personal Monitoring

The Dräger X-am® 2800 is a multigas detector designed for personal monitoring in potentially hazardous environments. Here's why you should consider it:

- **Measures up to Four Gases:** The X-am 2800 can detect up to four gases simultaneously. This includes flammable vapors such as gasoline, diesel and nonane, as well as O₂, CO, NO₂ and H₂S.
- **Impact Resistant CatEx Sensor:** The CatEx sensor is particularly robust and can withstand impacts. This makes it suitable for demanding work environments.
- **Real-Time Data Transmission:** With the Dräger Gas Detection Connect software, you can transmit data in real time and optimally manage your device fleet. Use the Bluetooth connection to transfer data to your smartphone or directly to the cloud via the X-dock calibration station.
- **Easy to Use:** The display clearly shows gas readings, alarms and the time. The large buttons are easy to operate even with gloves. In addition, the oxygen channel has four alarm thresholds for added safety.
- **Approved for Hazardous Areas:** The X-am 2800 is approved for use in areas classified as Ex zone 0 and is protected against the ingress of dust and water (protection class IP 68).
- **Durable and Powerful:** Long-lasting sensors and easy-to-replace spare parts ensure that the device remains operational for many years. Dräger offers a 4-year manufacturer's warranty on the basic device.

In short, the Dräger X-am 2800 offers the highest level of safety at a low cost of ownership.
