

DRÄGER PSS® AIRBOSS

Dräger PSS® AirBoss: Ergonomics and Safety for Firefighters

Dräger PSS® AirBoss is a self-contained breathing apparatus designed for firefighting operations. With its best-in-class ergonomics and low weight, it offers exceptional comfort and performance. Here's why you should consider it:

1. **Excellent Fit:** The ergonomic design of the PSS AirBoss makes the use of SCBAs less tiring. Height adjustment, rotating belt and easily adjustable harness adapt to any body shape and size. The lightweight frame maintains the optimal center of gravity, reducing stress and air consumption.
2. **Greater Safety:** Reflective surfaces increase the visibility of the Fire Brigade, while the personal alarm device (PASS) and Buddy Lights improve safety. The PASS emits visual and audible alarms if the operator is immobile, has run out of air or has suffered thermal stress.
3. **Flexible Configuration:** You can customize the regulator hoses, pressure gauge and auxiliary hoses over both shoulders or on the belt. The Quick Connect quick connection system speeds up cylinder replacement.
