

## HP PUMPS

High Pressure Motor Pump for forest fires or small urban fires. This type of motor pump is mainly designed for bush fires or apartment fires.

It can be mounted on a pick-up or a fire-fighting vehicle to pump small quantities of water with the impact of high pressure.

## FEATURES

- Diaphragm pump with pressure regulator and pressure gauge.
- UNI 25 suction mouth.
- Control panel complete with all control tools.
- Panel lighting spotlight.
- In-line foam system with continuously adjustable percentage from 0 to 6%.
- Oil bath gearbox
- Petrol or diesel engine with electric and manual starting for emergency.
- Automatic acceleration system that allows control of the accelerator via the trigger of the dispensing gun.
- Support frame in tubular steel, treated against corrosion.
- Manual reel with 50 meters of high pressure hose connected to the first delivery.
- Second free flow with quick connection.
- High pressure gun for water and foam.
- 20 meter high pressure hose with water gun fittings for use with second delivery.
- Suction kit composed of a 6 meter PVC spiral hose with UNI 25 fitting on one side and a foot valve on the other side.
