

HARNESS FOR BASKET STRETCHER

Harness that can be used for lifting and transporting the Basket stretcher. It consists of a main hook that can be attached to the winch of the emergency vehicle, two main belts (the length of which is adjustable), and four belts equipped with a carabiner for anchoring to the stretcher, essential in all horizontal and vertical lifting situations. Made of durable woven nylon, it is supplied with steel carabiners with safety catch.

The adjustable harness system allows the basketball stretcher to be lifted in complete safety, thanks to a safety coefficient of 7:1 which guarantees the safety of patients and operators even in situations at the limit of the product's performance.

- Belt length: minimum 1250 mm maximum 1680 mm
- Tape width: 50 mm / 20 mm
- Weight: 1.80 kg.
- Material: nylon, aluminium, steel
- Type of attachment: carabiner
- Number of fixing bands 4
- System capacity: 280 kg.

Environmental conditions :

use temperature: from -20 to +60 °C

Storage temperature: -20 to +60 °C

Relative humidity: 5 to 85%
